

I am a staff member at the Department of Geology, Faculty of Science, Chulalongkorn University, Thailand. I have been an AOGS member since 2007. My research interests are in geohazards (especially tsunami and earthquake) and petroleum geology.

If elected as a president for IG Section, I would like to accomplish the following,

1. Increase participation and number of active members from developing countries by promoting AOGS meetings, trying to allocate more financial support and if possible lower fees for participants from developing countries that are not listed in the low income and low middle income
2. Encouraging and supporting more student participation in the AOGS meeting through university links
3. Promoting AOGS meetings and activities to the non-members

I will connect with other scientists in the field of interdisciplinary geoscience to propose sessions on topics that are of global interest and increase numbers of high quality presentations and participations to the section. I am committed to promoting more participations from young researchers/scientists and of equal genders.

I will collaborate with other section presidents to advance science in the AOGS communities.
